

# CVCAC WEATHERIZATION TRAINING TRAILER

The Weatherization Training Trailer was developed as a teaching tool to help train the energy efficiency workforce. Vermont GREEN is a statewide training partnership focused on helping Vermonters get the skills they need to participate in the green economy, and the training trailer is a tool designed to allow Vermont GREEN to easily host trainings all around the state.

The trailer makes it easy to understand how improving air-sealing and insulation can increase a house's energy efficiency, reduce costs, and make the home more comfortable. From basement to attic, the trailer interior shows all of the ways homes leak air to the outside, and demonstrates the common conditions found in Vermont buildings.

When the trailer is not being used for training technicians, it will be used for educational events, such as energy fairs, job fairs, and hands-on Weatherization Skillshops (homeowner training for do-it-yourself weatherization). The half-ton trailer is transported by a professional driver, and when the exterior awnings are set up, can accommodate up to 12-15 people for trainings (5 at a time for tours).

Visitors are led by an experienced auditor or efficiency contractor through the informational displays. Handouts from Efficiency Vermont, the Department

of Energy, and Central Vermont Community Action, as well as other local or regional energy partners, are available to trailer visitors, and short informational videos will be running on a continuous loop.

Community groups and nonprofits are encouraged to inquire about hosting the trailer in their community for events.

## Inquiries contact:

Laurie Fielder, 802-477-5236

email: [lfielder@cvcac.org](mailto:lfielder@cvcac.org)

**Space needed to park:** 52 feet, level ground, hard surface, 12' 3" towing clearance

**Power requirements:** 120 volt, 3-prong outlet
